

Website Project Report — Engine Oil Brand Launch

1. Project Summary

Item	Detail
Business	Auto spare parts / oil / paint / battery distribution agency
New venture	Launching own-brand engine oil
Website scope	New oil brand only (single product line) — not the full distribution catalog
Sales model	Showcase site — actual sales go through distributors/dealers, not online checkout
Domain	Already owned
Hosting	Not set up yet
Branding	Brand name, logo, packaging — ready
Timeline	ASAP (days)

Item	Detail
Page count	Single page

2. What This Site Actually Needs to Be

Since you're not selling online, this isn't an e-commerce build — it's a **brand/product showcase page** whose job is to:

- Build trust and credibility for the new oil brand
- Show product range and specs clearly
- Make it easy for dealers, mechanics, and distributors to get in touch or find a stockist
- Work as a link you can share in WhatsApp, print catalogs, or with new dealer prospects

Recommended platform: A simple, fast static/CMS site — no need for a full e-commerce platform since there's no cart/checkout.

- Good options: Webflow, Wix, Squarespace, or a lightweight custom HTML site — all launch in 1–2 days
- No monthly transaction fees since there's no online payment processing needed

3. Site Structure (Single Page)

1. **Hero section** — brand logo, tagline (e.g., "Engineered for performance"), hero product shot, primary CTA ("Become a Dealer" / "Contact Us")
2. **Product range** — oil variants (grades, viscosities, pack sizes) with images and key specs
3. **Why this brand** — quality certifications, engine compatibility, what makes it different
4. **Dealer/distributor network** — "Find a dealer near you" or a simple inquiry form for new dealers
5. **About the parent company** — brief credibility booster (mention your existing distribution business as proof of industry experience)
6. **Contact / inquiry form** — for dealer signups, bulk orders, or questions
7. **Footer** — contact details, social links, address

4. What's Needed From You

- [] Domain DNS access (to point domain to hosting)
- [] Oil brand logo + packaging photography (you said ready)
- [] Product list: variants, grades (e.g., 5W-30, 10W-40), pack sizes, specs/certifications

- [] Company background blurb (leveraging your existing distribution credibility)
- [] Contact details / inquiry routing (who receives dealer inquiries – email, phone, WhatsApp?)
- [] Any certifications or quality marks (API, ISO, etc.) to display for trust

5. Suggested Timeline (ASAP track)

Day	Task
Day 1	Set up hosting, connect domain, choose page layout/template
Day 2	Add product range, specs, and photography
Day 3	Write brand story, company background, add certifications
Day 4	Set up dealer inquiry form, test all links/forms
Day 5	Final review, go live

6. Open Questions

- Do you want a **dealer locator map**, or just an inquiry form for now?
 - Should the site mention your parent distribution company by name for credibility?
 - Any oil certifications (API/ISO/JASO) to highlight on the page?
 - Who should receive inquiry form submissions (email/WhatsApp number)?
-

Next step: I can help draft the actual page content/copy, or start building the page layout – just say the word.
